### Inleiding

In de vorige nieuwsbrief eindigden we met de toezegging dat de kinderen van YASAP ons nog zouden schrijven over het afgelopen jaar bij YASAP en op hun school/universiteit. Daarvan kunt u in deze nieuwsbrief vier lezen.

**De overige brieven kunt u lezen op de website van YASAP, <https://yasap.nl> plus nog de brief van Debby, Jasper en Pak Niko over EKO-Enzym.**

(We hebben ervoor gekozen om de brieven te plaatsen in het Engels zoals ze door de kinderen, Debby en Pak Niko zijn geschreven).

Er volgen nog drie kinderen hoger beroepsonderwijs (Agus, Aris en Sarah). Drie meisjes zitten op de SMA = bovenbouw voortgezet onderwijs (Yenni, Yolanda en Sela).

Frengki deed toelatingsexamen voor theologie maar zakte en gaat nu de leraren opleiding godsdienst volgen.

De nieuwe afgestudeerde kinderen (Yos, Piter en Elin) van de landbouwschool hebben zich ook probleemloos aangepast bij YASAP.

Albert schrijft dat hij weer terug is bij YASAP na twee jaar op Kalimantan te hebben gewerkt. En hij is nu onder leiding van Pak Niko een zeer gewaardeerd staflid bij YASAP.

Maria is fulltime aan het werk in het ziekenhuis. Jasper is afgestudeerd landbouwniverteitstudent en fulltime werkzaam als staflid bij YASAP.

De ontwikkelingen van de organische landbouw bij YASAP zijn een belangrijk onderwerp voor bijna alle kinderen in hun brieven.

De zonnepanelen zijn aangelegd en de kinderen leren hoe ze deze moeten verzorgen.

### Lessons From The Wingless Angel

By : Yolanda

Becoming independent children is the hope of all of us at Yasap, especially being independent in doing everything in everyday life. Wingless Angel is the nickname for Mama Marsa and Mama Debby who have always been advisors to us.

When we were with Mama Marsa, Mama Marsa always taught us many things, starting from cooking in the kitchen, maintaining cleanliness inside the house and outside the house.

For example, in the kitchen, Mama Marsa teaches us how to cook food that is delicious and healthy for the body. Apart from the kitchen, Mama Marsa also taught us to always maintain cleanliness inside the house and outside the house.

We are so lucky to have Mama Marsa and Mama Debby who always advise us. Thanks to all Mama Marsa's teachings, we, as children, can now do many things that have been entrusted to us, especially cooking in the kitchen, keeping the house clean and going to the market to shop.

Now that we are children on our own without the figure of Mama Marsa, we have become independent, we have started to learn to follow the figure of Mama Marsa to manage many things on our own.

That's all from me, Thank You 😊😊

## Bible Camp at Kasih Karunia Senior High School

Oleh : Yeni

Bible Camp at my school is very good, so I enjoy participating in these activities. I am very happy because this is the second time I have participated in this activity at school and this year's Bible Camp really motivates me, because it corresponds to the friends given, namely "True Disciples" or true students where in this activity we will be divided into several groups to discuss or reflect together about the games we play

together and their relevance in our lives and their relationship to God's word.

I got group 12 or the last group and the name of our group was Ruth which was taken from the Bible, how Ruth was a true disciple of God. And in this activity there was something new that I experienced for the first time, namely that our school invited parents and their children to play games together and parents also had to play. From there I learned that togetherness is very important in the lives of all of us. We were divided into several posts to serve them and I was in post 1, namely the "Sakti Net" or spider web where parents and children had to work together to get through the holes in the web.

Even though we all did it in very hot conditions and were tired, we still tried to please them. Because this year is the last year I take part in this activity. I learned how to be a true disciple of God and be able to face many challenges in this life. And because this year is the last year I take part in this activity.

Thank You

## Solar power generation and How to use it

Oleh : Aris

I will tell you a little about the installation of hydroelectric power plants (PLTS) in YASAP. The PLTS installation began in June, by Mr. Obed and polytechnic students and assisted by me and Piter. Mr. Obed and

I were taught by Mr. Obed, starting from installation to how to use PLTS. The initial stage is the foundation or making a stand for the PLTS pole. There are 6 stands made according to the number of poles used, namely

6 poles. There are 6 modules used. The PLTS installed at YASAP is 1 meter wide, 2 meters high and 3 meters long. The function of the module is to absorb sunlight, after which the absorbed sunlight will then be converted into electrical power. The electricity produced can be used immediately or can also be stored in a battery for use at night.

Some of the advantages of PLTS that I feel are:

The hotter the sun's rays are, the greater the electricity or power produced, so when it is used at night the power is still remaining or the unused power is exhausted, besides that. The most tangible benefit is that solar power generation can reduce the cost of electricity use in YASAP. Electrical energy produced from solar energy can be used before using PLN electrical energy so that electricity bills can be more economical. PLTS is also environmentally friendly so that the earth's ecosystem can be better maintained in accordance with our environment at YASAP because of organic farming.

By using electrical energy produced from alternative energy from sunlight, the earth will avoid potential causes of environmental damage. The energy source is sunlight so it never runs out. This is different from electricity which is connected to the national electricity grid which requires fuel, causing air pollution.

Thank You

### **Organic Farming For Human Health Oleh : Sarah**

There are many events in the world of health that attract my attention. From the articles I read, 60% of people in the world are sick due to food poisoning that contains preservatives and chemicals.

In this case, the health discussed is related to the health of the land itself, and the health of humans who consume what is produced. Soil that has been contaminated by chemicals for a long time takes a long time to become good soil suitable for organic plants.

Starting with organic fertilizer, which is used to optimize soil fertility, so that the soil can adapt to organic fertilizer. If the soil is healthy, the plants planted will also be quality plants. All organic materials used come from nature, so the plant products obtained are safer to consume.

Health is related to what is used in the plant to be consumed. Organic plants are good for health because they do not contain any chemicals. So the plants produced are fresher. Organic ingredients do not contain preservatives, and the ingredients for making fertilizer also use fresh fermented fruits and vegetables.

Yes, YASAP (Children's and Women's Solidarity Foundation) is currently implementing an organic farming program, to create a healthy environment and fresh, chemical-free plants. YASAP provides opportunities for many people to care more about environmental and human health. So, with this organic farming program, it is hoped that YASAP will be the originator and a good start in the world of agriculture. Thank You

**Nog meer brieven** van kinderen / jongvolwassenen die bij YASAP wonen, **staan op de website** onder hoofdmenuknop **‘Brieven’**.

Sela

Agus

Frenky

Maria

Albert

Yasper

Brief van Yasper staat op de website onder **‘Ontwikkelingen Kupang’**.

Brief van Pak Niko over EKO-Enzym ook onder menuknop **‘Ontwikkelingen Kupang’**.
